

I'm not robot!

Education in the classrooms, meeting areas, and homes continued to unfold. The sole dependence on paper resources for subject information diminished and e-books and articles, as well as online courses, were anticipated to become increasingly staple and affordable choices provided by education institutions according to Whyte in a 2002 presentation.[147][148] Digitally "flipping" classrooms is a trend in formal education that has gained significant momentum. Will Riches, author and visionary for the digital education realm, points to the not-so-distant future and the seemingly infinite possibilities for digital communication linked to improved education. Education on the whole, as a stand-alone entity, has been slow to embrace these changes. The use of web tools such as wikis, blogs, and social networking sites is tied to increasing overall effectiveness of digital education in schools. Examples exist of teacher and student success stories where learning has transcended the classroom and has reached far out into society.[149] The media has been instrumental in pushing formal educational institutions to become savvier in their methods. Additionally, advertising has been (and continues to be) a vital force in shaping students and parents though patterns.[150] Technology is a dynamic entity that is constantly in flux. As time presses on, new technologies will continue to break paradigms that will reshape human thinking regarding technological innovation. This concept stresses a certain disconnect between teachers and learners and the growing chasm that started some time ago. Richardson asserts that traditional classroom's will essentially enter entropy unless teachers increase their comfort and proficiency with technology.[149] Administrators are not exempt from the technological disconnect. They must recognize the existence of a younger generation of teachers who were born during the Digital Age and are very comfortable with technology. However, when old meets new, especially in a mentoring situation, conflict seems inevitable. Ironically, the answer to the outdated mentor may be digital collaboration with worldwide mentor webs; composed of individuals with creative ideas for the classroom.[151] See also Education portal Politics portal Anti-schooling activism Blab school Block scheduling Certificate of Initial Mastery Criterion-referenced test Educational philosophies Excellence and equity Female education High school graduation examination Higher-order thinking Inquiry-based Science Learning crisis Learning environment Learning space Merit pay Multiculturalism Political correctness Project-based learning Special Assistance Program Student-centered learning Sudbury Valley School Teaching for social justice University Reform Web literacy References ^ "The Education Reform Movement" | Encyclopedia.com, www.encyclopedia.com, Retrieved 2021-04-11. ^ Goertz, Margaret (1995).
